For Immediate Release

Peelle is proud to announce receipt of its 217th Patent. The US Patent office has issued the patent for Peelle's new Door Safety Device. The Door Safety Device (DSD) was created as a precautionary device, used to stop the door / gate panels from falling in the event of chain failure. Chain failure could be caused from a defect but is usually caused by misuse; specifically a forklift truck operator using the blades of the forklift to open the biparting door and forcing the door to open beyond the chains' capabilities. The DSD was created with the

goal of having a self contained retrofit component that would easily install onto existing Peelle equipment as well as other freight manufactures equipment. The DSD was designed to be positively activated; it's always working, sensing the tension within the chains. Once the tension is no longer detected the DSD immediately wedges itself onto the door / gate rails. The DSD was created by a team of Peelle engineers. David Kairis has been with Peelle for 6 years, he holds a degree as a Mechanical Engineering Technician, he's currently assigned to R&D and is responsible for Advertising Collaterals, Product Standards, and Installation Manuals, Dave's contribution on the DSD was the graphics submitted to support the patent. Zygmunt Dziwak has been with Peelle for 5 years, he's a Graduate Engineer form Poland and is an Ontario Professional Engineer. Zygmunt was the lead designer of the DSD. Rick Lajeunesse has been with Peelle for 16 years starting in the engineering department and was later assigned to R&D; his contribution to the DSD was design review and developing a prototype. Steve Reynolds is Peelle's R&D manager; Steve has been with Peelle for 11 years and holds a Mechanical Engineering degree and is a Professional Engineer; Steve is responsible for design over site.

The Peelle Door Safety Device is available now; call 631-231-6000 X11 and order part 4632.
