

The Cadillac Service Station
 2301 South Michigan Ave.
 Chicago, Ill.
 Architect: Albert Kahn
 Contractors: Thompson-Starrett Co.

For long, efficient service

THE purchaser of a Freight Elevator Door buys the *service* that the door will render, besides the door itself. One of the reasons for the installation of PEELLE DOORS in the Cadillac Service Station Building is the long, efficient service for which these doors are noted.

The rapid, vertical, counterbalanced operation allows full clearance of door openings; speeding up loading and unloading of the elevator car. The truckable feature establishes smooth passage between building floor and elevator car. PEELLE Doors are built to withstand the most severe usage.

We recommend that you send for a copy of the PEELLE Catalog, or have a member of our engineering staff call on you, without obligation.
